

DEJANA

Side Katerack®

Turn Your Van Inside Out!

Patented new design offers the most efficient use of your van's cargo area!

The Katerack® is a patent pending design offered exclusively by Dejana Truck and Van Body and its approved distributors. It is designed to offer the most efficient use of your van's cargo area.

Standard configuration is with either two or three pull out shelves. No crawling into the van kneeling on an unseen sharp object or tool. Pullout shelves brings everything that was on the inside within easy reach!

- Each shelf can handle an evenly distributed load of 300 lbs.
- 21" wide x 36" or 47" deep drawers
- Each shelf can be fully extended using heavy-duty commercial grade drawer slides with double locking mechanisms and a full width grab handle.
- Shelves are constructed of extruded aluminum perimeter angle and 3/8" thick FRP shelving material.
- Shelving can be adjusted vertically, aided by the measuring tape markings on each vertical upright.
- Optional ABS molded wall cladding (not shown) is available for van models.
- An optional 6" or 10" deep drawer can handle larger tools such as meter bags, gauges, sprayers, cordless drills, etc...
- Will install as either stand-alone item, or with Katerack in the rear.

Available as full-width, 47" deep shelves, or...

36" deep to accommodate curbside storage

3 Standard drawers with optional 6" or 10" deep drawers

Rear Mounted Systems also Available for:
