

## Case History 75

***“I wouldn’t want to be without my Switch-N-Go!”***

Two years ago at the GIE trade show I looked at the *Switch- N- Go* system and was very impressed with the different body options. I spoke to the gentleman there and told him, “When I get ready to buy a new truck this is a must have system.” Of course I meant down the road. Two weeks later my truck blew-up and I found myself contacting the nearest distributor. I quickly purchased the demo truck and three bodies’ right from their lot.

The dump box is great for hauling dirt and sand. The drop box works great for hauling firewood and can handle as much as five face cords in one load. “As matter of fact I’m purchasing another drop box so I can drop one box off at the wood site, take the other box to unload and stack while my men load the box at the wood site.”

The flatbed is a versatile unit; I can load four pallets of sod, take them to a sight, drop off the flatbed and still continue using the truck with no down time for loading/unloading. With no need for extra help, loading equipment is easier and faster. Loading can be handled by one man, “I drive it on, strap it down and I’m ready to hit the road!”

“I have even hauled the local school’s drum section while pulling the rest of the band on a trailer for the homecoming parades - This is great advertising!” When people ask about Switch-N-Go it gives me a chance to tell them how I use one truck and utilize three different bodies. “This truck has saved me time and money - I can have three different jobs going at once with only one truck.”
